

STEPHEN HAWKING

David C F Wright PhD

Stephen Hawking was born on 8 January 1942 in Oxford. He became a scientist and a cosmologist and, for many years, has bravely suffered from amyotrophic lateral sclerosis.

He has received many significant awards such as CH, CBE, FRS and FRSA and he is a very dedicated man with his interest in cosmology.

Cosmology deals with the world, the universe, space, time and phenomena and is based on mythology, primitive religion, historical science and esoteric literature. Mythology is the study of myths, stories without the basis of fact and is merely speculation and guesswork.

What is esoteric is designed for the alleged people in the know alone, and therefore it is restricted knowledge and rare.

As with mythology, what is esoteric cannot be proved but science often misleadingly represents their knowledge as facts. Speculation is ideas and guesses about what is unknown.

Science is said to be the systematic study of nature based on observation and experiment. It claims to be the explanation of phenomena which is always said to be something extraordinary.

Take the theory of evolution. A theory is an idea, not a fact, that allegedly explains what is considered facts but there are a growing number of scientists that confirm that science proves evolution to be both wrong and unscientific.

Consider the missing links which were said to prove the descent of man from apes which scientists accepted and 'proved' were facts. There was the Piltdown man, the Nebraskan man, the Java man, Lucy the hominid, the Orca man and Archaeoraptor to name a few. Science said that these were undeniable proofs of the missing link yet there were all proved to be false.

These were the lies of evolutionists and scientists.

Why then is this theory of evolution taught in most schools as fact ?

There is a conspiracy to deny God the Creator. This is the work of atheists.

Hawking is an atheist and has said so. He has declared that there is no God ; Science is the Creator. Heaven does not exist as it is a fairy tale. There is no such thing as Fate.

I do not wish to misrepresent Hawking but I believe that he accepts that there are extra terrestrial beings that in some ways resemble humans. By this, he may refer to aliens and the suggestion that the alleged aliens at Roswell had their DNA tested which was comparable with humans. The problem with this is that many aliens have been proved to be fictitious as have their photographs also been shown to be false just like the missing link frauds. As far as I am aware, there is no independent proof of the existence of aliens although speculation is rife.

I may be missing something but for a scientist to achieve all these awards for speculation is beyond me and very many people including men of science have said the same thing. But then science is predominately guesswork which sometimes may become a reality.

What Hawking believes is speculation and many people also accept this teaching which is without proof because they are secular and do not want to accept any alternative position.

He has recently been given a Lifetime Service Award but what has he achieved ? What irrefutable proof has he of any of his speculations ?

I have politely asked some of his supporters this but they refused to answer me and were unpleasant.
